

Mr. Kraiwit Wongpipan

Software Engineer

Bangkok 10310, Thailand | kraiwit.w2542@gmail.com | 0827714571 , 0997278339

Professional Summary

Software Engineer focused on backend development, with hands-on experience in DevOps practices and frontend development. Experienced in building reliable backend systems for financial and insurance domains, with a strong emphasis on data correctness, performance, and maintainability. Familiar with Clean Architecture, SOLID principles, microservices, and TDD practices. Hands-on experience with Docker, CI/CD pipelines, and deploying backend services to cloud environments such as GCP, with additional familiarity with AWS fundamentals.

Technical Proficiencies

Languages:	Golang, JavaScript, TypeScript, Python, SQL
Core Backend:	RESTful APIs, Go Fiber, Echo, GORM, JWT Authentication, WebSocket, Swagger / OpenAPI
Frontend Familiarity:	Next.js, React, Vue.js, TypeScript
Architecture & Practices:	Clean Architecture, Microservices, SOLID Principles, TDD, Domain Modeling, Unit Testing
Database:	PostgreSQL, MySQL, MongoDB, Database Migration, Indexing, SQL Optimization, Data Validation
Infrastructure & DevOps:	Docker, Docker Compose, GitHub Actions, Docker Hub, GCE VM, Cloud Run, Cloud Storage, Nginx, Cloudflare
Tools:	Redis, Elasticsearch, JasperReports

Work Experience

Software Engineer (Backend – Golang), Horixon T8 (Subsidiary of Dhipaya Insurance & Beryl 8), Bangkok

Jul 2025 to Present

Enterprise Insurance Management Platform

- The system supports the complete insurance lifecycle from quotation to policy issuance.
- Developed many production microservices using Clean Architecture and DDD principles
- Go microservices development with Echo, GORM, PostgreSQL, Redis, and RESTful APIs
- Insurance premium calculation logic for coverage terms, surcharges, discounts, and risk-based pricing
- Decimal-based financial computation, input validation, and data integrity checks
- PostgreSQL query optimization for financial and insurance business workflows
- JWT / Keycloak-based authentication and authorization flows
- Clean Architecture, unit testing, structured logging, Swagger / OpenAPI, and Docker-based development
- Production issue investigation involving quotation logic, API behavior, and data consistency

Software Engineer, x10 it resource, Bangkok

Nov 2022 to Jun 2025

- Developed backend APIs and business logic for banking and enterprise systems using Zoral, a JavaScript-based low-code platform.
- Designed database schemas and optimized SQL queries for PostgreSQL and MySQL.
- Built a real-time order processing system using Golang, Redis, WebSocket, and PostgreSQL.
- Generated structured business and financial reports using JasperReports.
- Monitored logs and investigated production issues using Elasticsearch.
- Resolved production defects and improved backend reliability across enterprise systems.

Junior Software Engineer Intern, INET, Bangkok

Jun 2022 to Oct 2022

- Developed web pages from Figma designs and maintained frontend features using Vue.js, React.js, and JavaScript, including API integration, form validation, and defect fixes.
- Integrated frontend features with backend APIs, including form actions, validation, and error handling.
- Assisted in building and updating CRUD APIs with Node.js and Golang.
- Worked with JWT-based authentication and fixed defects during development and testing.

Devfolio — Personal Portfolio & Blog Platform

- Next.js, TypeScript, Golang, PostgreSQL, Docker, GCP
- Built a full-stack portfolio and blog CMS using Next.js 14, Go Fiber, PostgreSQL, Docker, and Clean Architecture.
- Developed RESTful APIs with JWT authentication, blog management, file upload, Markdown rendering, tags, and admin features.
- Designed a GitHub Actions CI/CD pipeline covering tests, migrations, Swagger generation, Docker build/push, deployment, and health checks.
- Deployed frontend on Cloud Run and backend on GCE with Docker Compose, using GCS for asset hosting and Cloudflare for DNS.

Education

King Mongkut's University of Technology North Bangkok, Thailand

Bachelor of Computer Science (Bilingual Program)

Jan 2018 - Jul 2022

CERTIFICATIONS

- Google Cloud Fundamentals: Big Data and Machine Learning
- Google Cloud Fundamentals: Core Infrastructure
- Cybersecurity for Vendor
- Practical Database Design for Big Data

Languages

Thai: Native speaker, English: TOEIC 650 (2023)
